

Phase 6 — Monitoring, Drift Detection, and Governance

Business Goal

Ensure long-term reliability, safety, and compliance of the AI system.

- Implement data validation checks for missing values, numeric ranges, and unseen categories.
- Track feature and prediction drift over time.
- Maintain an audit log for predictions and model versions.
- Document system limitations, assumptions, and retraining strategy.

Deliverables

- Monitoring scripts
- Drift detection report
- Governance and compliance document
